

Golden Pass Products

Unrivaled Experience | Global Vision | American Jobs

ABOUT

Proposed \$10 billion project to add liquefaction and export capabilities to the existing liquefied natural gas import terminal near Sabine Pass, Texas.

New facilities for natural gas pretreatment and liquefaction would be constructed.

Project would utilize existing tanks, berths and pipeline infrastructure.

Estimated send out capacity would be 15.6 million tons of LNG per year.

PARTNERS

Golden Pass Products was formed by affiliates of Qatar Petroleum and ExxonMobil.

Partnership of two leading energy companies with an unrivaled record of producing, shipping and marketing natural gas globally.

Extensive experience of the project shareholders provides the technology, marketing and financial strength to construct a world-class liquefaction and export facility.

COMMITMENT

Safety Project would be constructed and operated with the same unwavering commitment to safety as the existing facilities. Since operation, there have been zero lost-time injuries in the Golden Pass employee base.

Environment Project would leverage the existing site and facilities, minimizing environmental and community effects. In addition, Golden Pass' project mitigation efforts will help restore wetlands in the region.

Community For the new project, Golden Pass Products will build on its long-standing partnership with Sabine Pass and the southeast Texas communities.

BENEFITS

\$10 billion investment
in infrastructure at the facility

\$31 billion in U.S. economic gains
over life of project

\$4.6 billion in taxes
at local, state & national levels

9,000 construction jobs | **3,000** jobs at peak construction

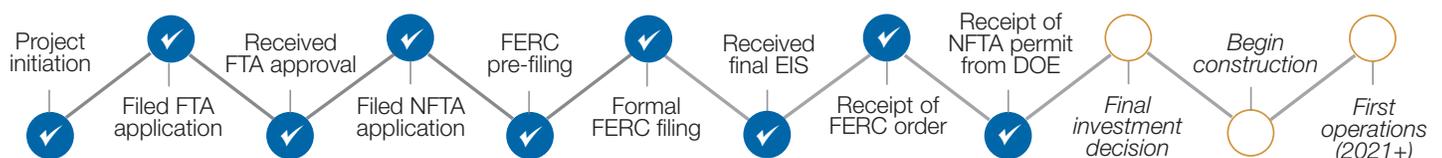

Expected to generate
45,000 direct & indirect full-time jobs
during construction
